

Quick Start Guide

Details

The QSG provides a quick reference for setting up the CelestixFederated solution.

See the *Installation Guide* for detailed instructions.

A license must be purchased to activate the product before the end of the 30-day trial period.

Assumptions

Skills and Knowledge

- Networking technology
- Windows Server® management
- Microsoft Active Directory®
- Microsoft Office 365™

Network Settings

- Active Directory is used for the domain controller.
- Static IP addresses are reserved for network adapters as needed.

Installation

Log in to the server with an administrator account.

Run the installer file as an administrator.

Follow the wizard to complete the application install.

Setup

Log in to the administration web UI.
https://ServerName| LAN IP address:8098 administrator
(local administrator account password)

Run the setup wizard.

DNS Configuration

Configure DNS so clients can resolve the ADFS Service Name to the IP address assigned to the ADFS server or cluster.

Federation Configuration

Run the ADFS/O365 setup wizard.
Deployment options are:

- Stand alone or primary server, select **Create the first federation server in a federation server farm.**
- HA servers, select **Add a federation server to the federation server farm.**

Disater Remediation

To preserve the initial system state, take a snapshot using the hypervisor.

Create a backup of initial configuration.

Software Updates

Check the Celestix Software Updates Service (SUS).

Check Windows Update.
