

UAG: Basic HTTP Portal Trunk

Skill level: Beginning

Requires: UAG Management console

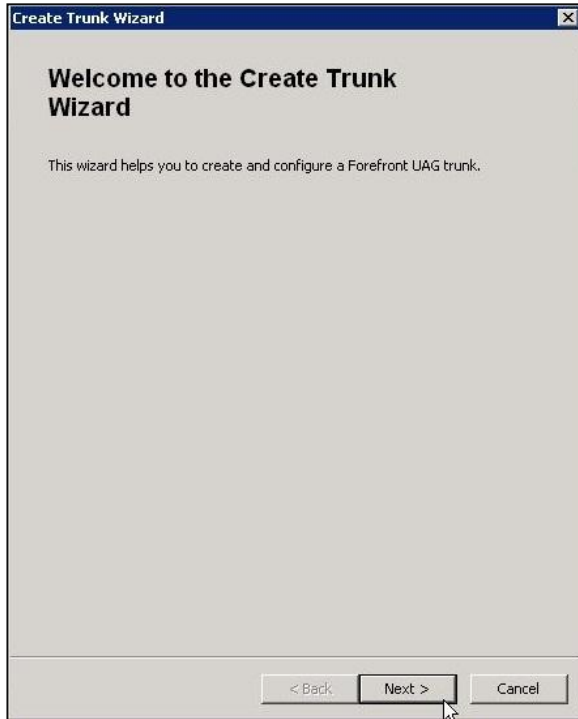

This document will provide instructions to create a basic portal trunk in UAG.

To Configure a Basic Portal Trunk:

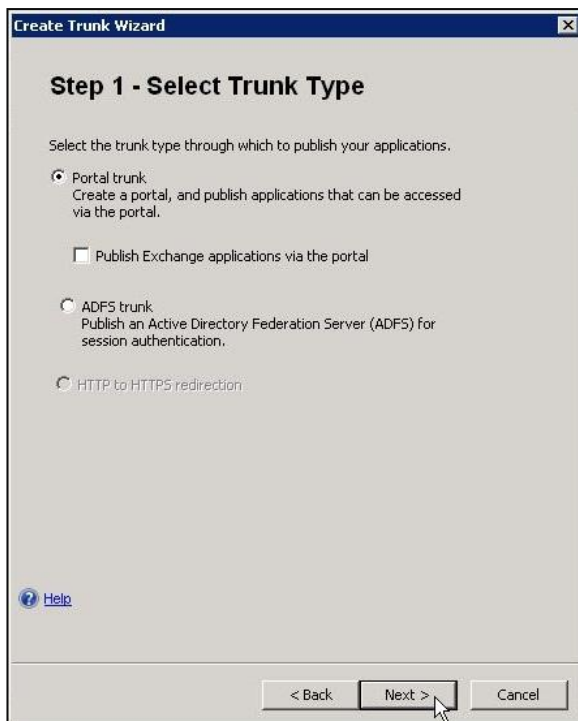

1. Launch the UAG Management application.
2. Right-click **HTTP Connections** and select **New Trunk**.

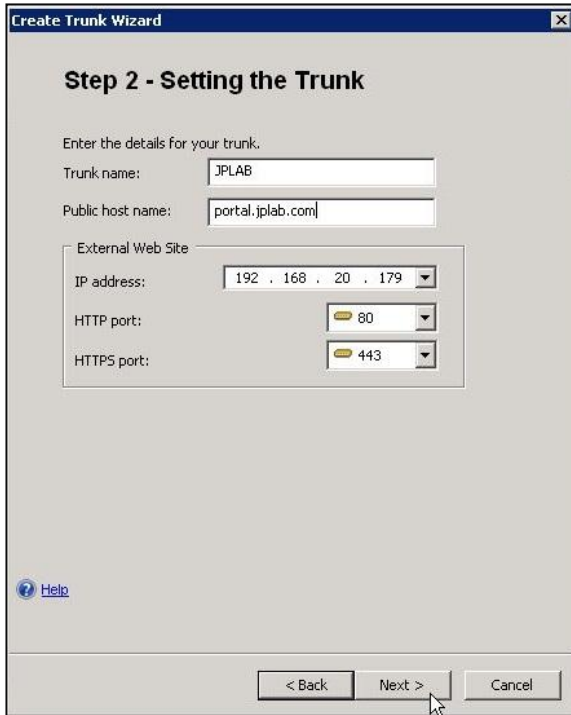

3. The **Create Trunk Wizard** will appear, click **Next**.

4. Select **Portal trunk**. Click **Next**.

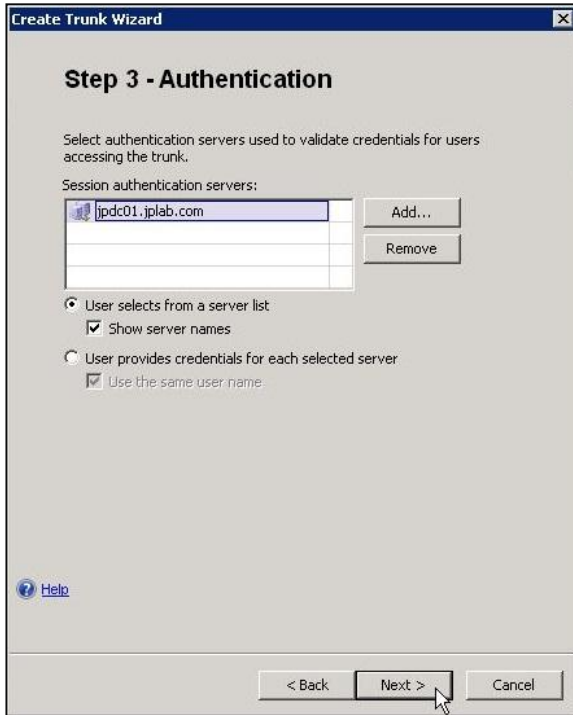

5. Name the trunk. Input the public host name and use the drop down menu to select the External IP address of the appliance. Click **Next**.

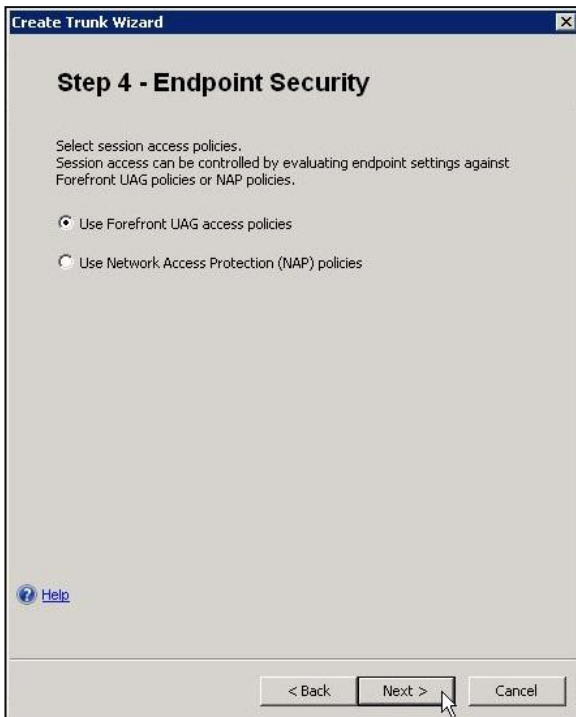

6. Select an authentication server.

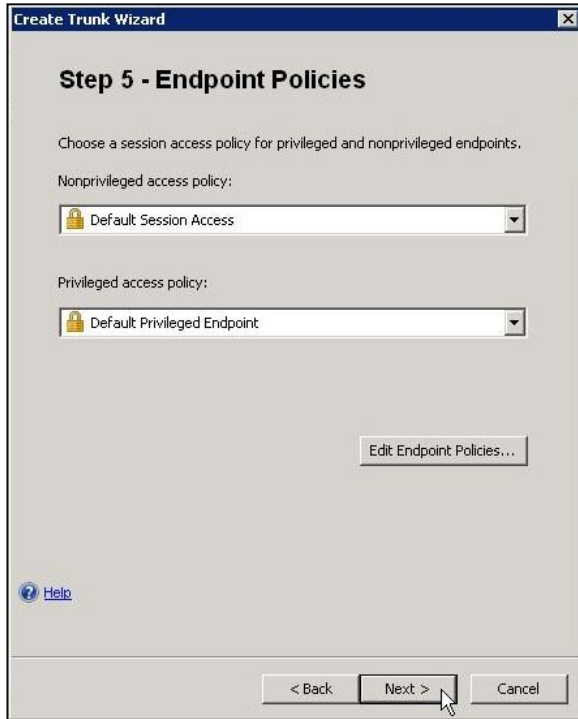

7. Click **Next**.

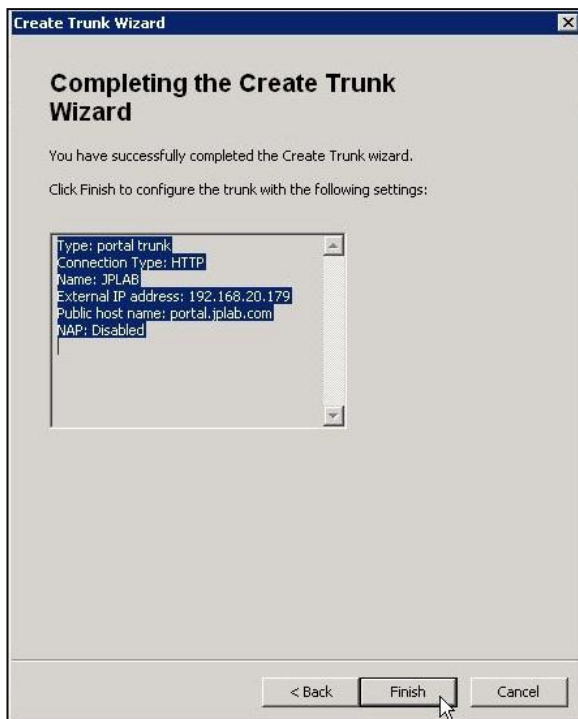

8. Select **Use Forefront UAG access policies**. Click **Next**.

9. Leave the default endpoint policies as is and click **Next**.

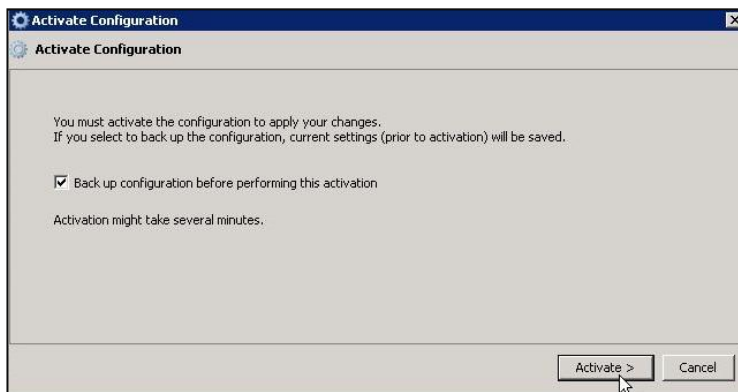

10. Click **Finish**.

11. Activate the configuration.

12. Backup the configurations and click **Activate**.

13. Click **Finish**.

You have now completed the steps to configure a basic UAG trunk.
