

I Know I Need DirectAccess... Now What?

Goals ■ Easy and Fast Deployment ■ Secure, Optimized Solution

A Quick Guide to Simple Implementation

WHY CAN'T I USE GENERIC HARDWARE?

Unnecessary Hardware

Components like graphics cards and CD drives aren't required in security devices, and only slow them down

Less Secure

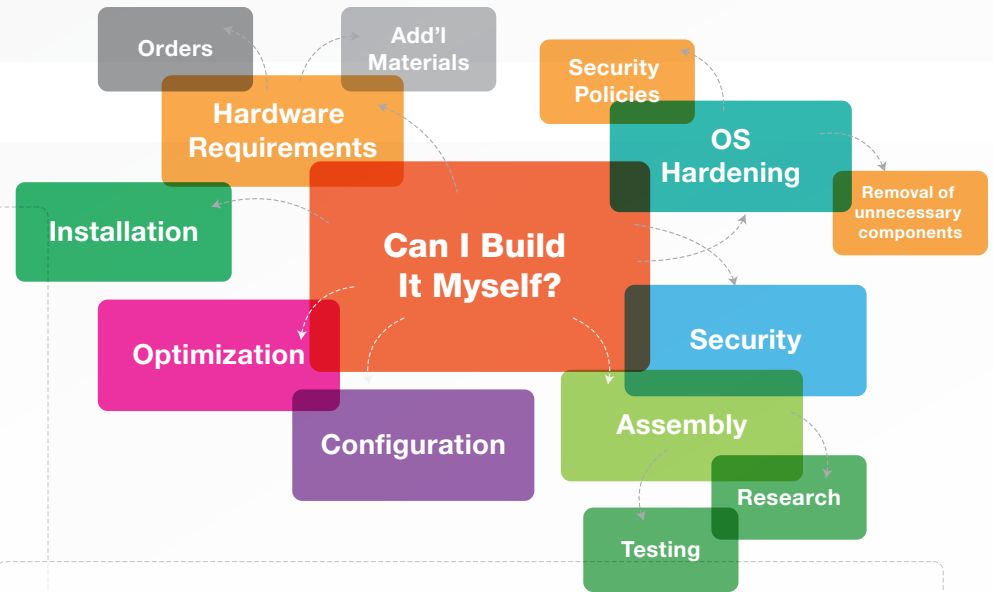

Additional components present an increased attack surface

Less Reliable

Mean Time Between Failures (MTBF) is higher than dedicated security hardware

WHAT'S SO GREAT ABOUT A DEDICATED APPLIANCE?

- Ready to deploy—now!
- Preinstalled and configured software—no complex setup required
- No time needed for assembly or installation
- Complete support, anytime

RISKS OF VIRTUAL HARDWARE PLATFORMS

- Demanding processor and network intensive applications
- Requires valuable processing power
- Security Risks: Compromised virtual layer = compromised platform
- Heavy reliance on CPU and networking resources
- Increased complexity
- Difficult to troubleshoot and support

Celestix Edge

- + Purpose-built appliance for rapid deployment & easy management of DirectAccess
- + Scales as you grow
- + One vendor support for all layers of the solution
