Overview

Celestix MFA is a multi-factor authentication solution that enables organizations to empower their mobile workforce while ensuring industry leading protection of digital identities and protecting against unsolicited access to corporate resources, a primary reason for the loss of data.

Businesses use Celestix MFA to protect their network perimeter with strong, secure access and single sign-on to the leading Web and SaaS applications, native mobile apps and traditional enterprise resources (including VPNs, firewalls, virtual desktops and Windows or Linux servers).

Benefits

Compliance : Easily meet federal and industry regulations for strong authentication such as PCI DSS, HIPAA, GDPR, Sarbanes-Oxley, EPIC e-Prescribe and more.

Cost-effective : No hardware to deploy and manage, attended enrollment and self-service user enrollment to reduce administrative burden.

Scalable : Celestix leverages your existing Microsoft Infrastructure to rapidly scale as your user base grows, removing the need for investing in more hardware.

Compatible : Integrates seamlessly with existing technology investments and end-user smartphone platforms.

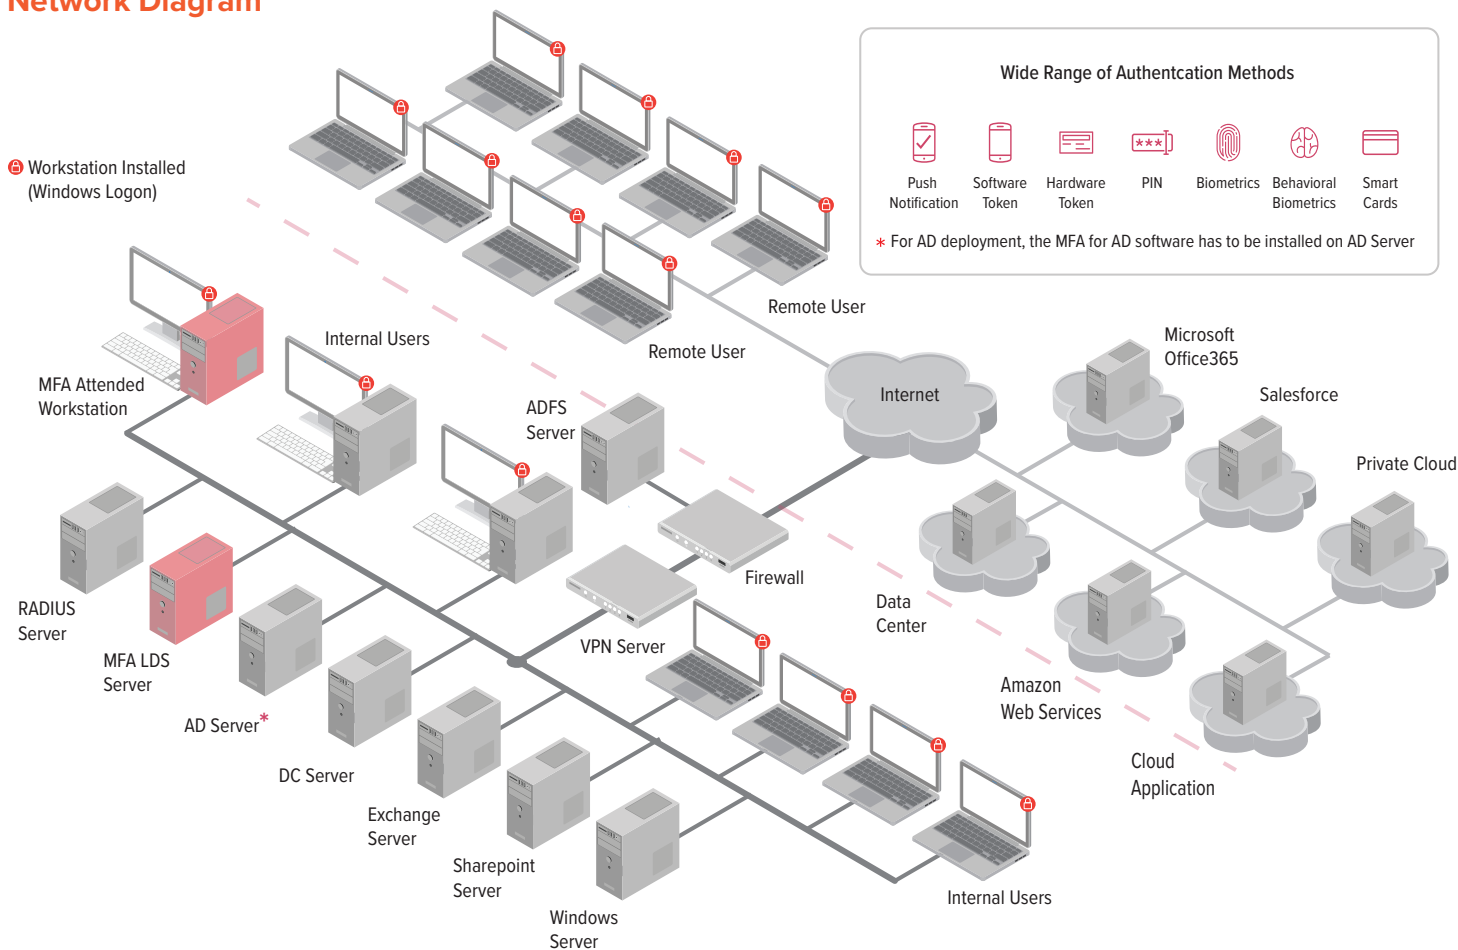

Features

- Supports all VPNs, SSL VPNs, Windows Logins, cloud and on-premises applications.
- All encryption algorithms are FIPS 140-2 compliant
- Policy engine delivers smarter, adaptive authentication
- Includes behavioral and contextual risk-based policies
- Wide range of authentication methods including: Push notification, One-time passcodes (OTP), software and hardware tokens, Smart Cards, Biometrics
- Enrollment, authentication and policy enforcement
- Self-service user enrollment
- Creates, distributes and enforces MFA policies
- Central repository for user credentials
- Comprehensive reporting and compliance engine

Flexible Integrations

- Secure all important logins with Celestix MFA Smart Authentication Platform.
- All RADIUS-compliant remote solutions
- Local and remote Windows logins
- Internal and customer-facing web applications
- Microsoft Office 365
