

Server Power Control

Applies to: 6400, 8400 appliances

The Power Control and Status screen provides remote power on/power off functionality.

Access by navigating to **Remote Control|Server Power Control**. Illustration 1 provides a reference.

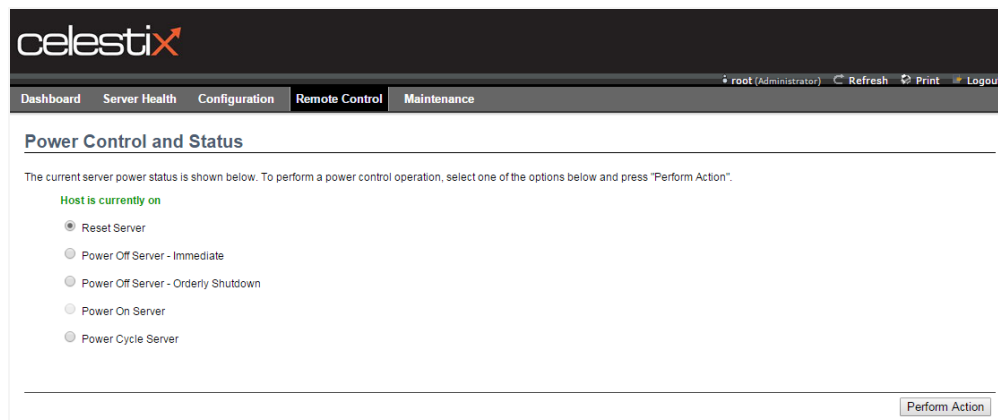

Illustration 1: Server Power Control Screen

Power Options

The following actions are available:

- **Reset Server** – reboot the system immediately.
- **Power Off Server – Immediate** – shut down server immediately without proper OS shutdown.
- **Power Off Server – Orderly Shutdown** – shut down the system gracefully through the OS.
- **Power On Server** – boot the appliance.
- **Power Cycle Server** – perform a shutdown, power disconnect, and system restart.

Note: Only available options can be selected.

Instruction Set (continued)

To access power options

1. Navigate to **Remote Control|Server Power Control**.
2. Select an option.
3. Click **Perform Action**.

Depending on the selection, the action may take some time to complete.

When an action has completed, the web page will refresh to display the latest power status.
